LEMORAU CT 1500

Manual Core Cutter Machine

DESCRIPTION

Lemorau CT 1500 is a manual core cutter that is compact, efficient and cost effective. It produces an accurate, clean, quality cut with quick and easy change-over for multiple core diameters and wall thickness. CT 1500 is very easy to operate, after sliding the parent core onto the mandrel, the operator sets the end-stop, which determines the width of the cores cuts. The operator then presses the start button, lowers the knife using the handle and cuts the core.
